

AccuSpeech *Mobile*

The AccuSpeech@Mobile voice solution takes mobile productivity to the next level by providing mobile field service workers the added advantage of maintaining eyes and hands 'on task', with voice control of application control, navigation, data collection, and application voice response.

Voice control not only out-performs mobile keyboard functionality but in real terms transforms the mobile device and application into a real time mobile assistant. Now each mobile worker is transformed into more-than-one, each mobile workforce, more productivity than its numerical size.

The increased speed, accuracy, responsiveness again alters the productivity landscape with enough muscle to drive another round of 25 to 50 percent increases in mobile productivity.

- Hosted/On-Premise

Faster, More Accurate Mobile Voice Transactions

For mobile workers in the field it's all about faster customer response and increased customer satisfaction. For mobile workforce management its all about achieving customer satisfaction and reducing overhead costs and expanding workforce productivity without increasing workforce size.

Faster more accurate act voice transactions and application voice response is a 'force multiplier'. Your existing investment in mobile devices and applications, when optimized with voice capabilities, enables each mobile worker to maintain their visual and manual focus 'on task' while using immediate voice commands and response for application control, data collection, information access and application voice response.

Voice Directed

- Device Control
- App Navigation
- Data Collection
- Application Voice Response

**Universal
Voice Utility**

"Faster more accurate mobile voice transactions are a 'force multiplier' that speeds responsiveness and increases customer satisfaction."

Faster Transactions	Eyes-On Task	Hands-Free Mobility	Improved Focus On Subject Area Expertise	Increased Mobile Worker Safety	Increased Productivity
Faster Data Access Data Entry Navigation	Eyes-On Customer	Extends Manual Reach & Grasp	Improved Concentration	Eyes-On Surrounding Environment	Substantial Reductions Operational Cost
Increased Data Accuracy	Eyes-On Business Environment	Optional Multi-Tasking Capability	Greater Worker Effectiveness	Hands-Free Response Unexpected Events	Increased Worker Efficiency & Safety
