## Voice Productivity for Mobile Retail

AccuSpeechMobile's *Universal Voice Utility* is a software solution that provides a simplified *fully mobile* approach for delivering sophisticated voice capabilities and seamless integration to your mobile in-store retail workforce retail applications. The voice capabilities and application integration are achieved solely from the mobile device, mobile computer, laptop and tablets.

Each retail worker's application and device becomes a legitimate 'collaborative partner' in store operations, extending and for management a 'force multiplier' that translates into more cost reductions and extended profitability. The AccuSpeechMobile solution extends the value of ***your existing IT application and hardware investments***, optimizing performance while eliminating any risky changes to applications or business processes. Now hands-free, eyes-free voice capabilities provide your workforce with faster voice transactions, instant voice access to retail information, and, in addition your applications can voice-support and alter your mobile workers with the information they need.

### Voice Functionality for All Your Existing Retail Workforce Apps

#### Universal Voice Utility

- Manager Voice Alerts
- Out-of-Stock
  - Shelf-Replenishment
  - Check-Out Over-rides
  - Merchandise Compliance

# Seamless Mobile Voice for Retail Apps

## Inventory and Stocking Applications

Retail personnel receiving and stocking arriving inventory and working the floor stocking shelves are challenged with a series of manual and visually dependent tasks, accurately executed to ensure fully stock shelves for customers. Voice control over your existing mobile inventory applications, provides the each mobile worker with the ability to maintain manual and visual focus on each task, while sequentially receiving each voice assignment from your application, voice-directing task confirmations and accurately voice-collecting related product quantities

## Management Voice Alerts

Based on the analytics and inventory monitoring built into your applications, 'if/then' voice programming is easily provided on manager devices to provide OOS voice alerts, wherever the manager is located, should any product quantity fall below any preset levels, enabling appropriate actions to remedy the stocking or inventory problem. The same level of flexible voice alerts can be provided for any status requirement that can ensure fast management response.

## Merchandise & Plan-o-Gram Compliance

Merchandise and plan-o-gram compliance cycles can be lengthy and error prone particularly with paper-dependent systems or mobile keyboard interfaces. Voice enabling these systems can permit the retail worker to interact quickly allowing fast visual inspection and voice confirmations, errors or product/quantity deficiencies.

## Universal Voice Utility

### Automated Voice Prompts to Workers

- Voice Tutor for Training New Employees 
- Step-by-Step Task Instructions
