

Simplified & Affordable Voice Productivity

Warehouse to Retail: Single Channel to Omni-Channel

Get all the voice productivity you want, anywhere you want it. Now voice productivity is affordable, practical and ROI compliant, for any supply chain distribution operation, single channel to Omni-Channel -- from the warehouse to transportation or retail. For the warehouse that means any WMS application, commercial or custom-built, from voice picking, voice-directed inventory, cycle counting, receiving, yard management... virtually any warehouse application. In addition, the advanced AccuSpeechMobile voice solution can also deliver the same cost savings and productivity gains to your other SCM applications, from yard management, transportation, direct store delivery and in-store retail applications.

“Server-Less” Simplified WMS Voice Productivity

The innovative AccuSpeechMobile Voice solution directly upgrades your WMS and other SCM application with all the voice functionality you need, with seamless application integration, solely from and on your mobile devices. That means:

- **No server-based integration**
- **No WMS business process changes**
- **Your WMS business process and workflows are voice-enabled directly**
- **Easy, Fast Change Management**
- **No More Expense Acquisition or Change Management Costs**

The innovative 'voice utility', is ROI-scalable making voice productivity an affordable option for any size warehouse operation or larger networks comprised of multiple distribution centers, warehouses or retail outlets.

“...all the traditional benefits of voice productivity, plus hassle-free integration...”

DC VELOCITY

“... one of the key selling points of the new system has been the ease of integration and low costs.”

DC VELOCITY

How It Works

This is the proven voice innovation you've been waiting for! Now you can deploy a practical voice solution for all your WMS transportation, retail and other supply chain productivity apps. The innovative AccuSpeechMobile voice solution eliminates the costs, complexities and risks associated with older pioneering voice technologies, providing complete voice functionality and integration solely from your powerful warehouse mobile devices.

Just imagine a completely mobile solution that eliminates your IT server as the source of costly voice integration with your commercial or custom-built WMS applications. The AccuSpeechMobile device-based Universal Voice Utility installed on your devices and customized by the PC-based Voice-Enabling Console, is a practical, easy-to-deploy solution. It makes voice productivity an affordable alternative for any warehouse operation or networked

About AccuSpeechMobile

About AccuSpeechMobile

AccuSpeechMobile is an innovative mobile voice technology that upgrades any mobile workforce application with a fully functional voice-user-interface (VUI). The mobile software solution provides full voice functionality and seamless application integration powered *solely* from your mobile devices.

AccuSpeechMobile is a patented, one-of-a-kind solution adopted and proven by world-class companies.

Now mobile SCM or field service workforces everywhere can achieve greater productivity by using faster, more accurate voice-commands to collect and access the information they need, while maintaining manual and visual focus on their mobile tasks. The mobile solution supports any web, TE, or smart/thick client mobile application, whether *on-premise*, *cloud-based*, *hosted* or *SaaS* mobile implementations. www.vanguardvoice.com
